Supplementary Tables with structure-wise DSC and standard deviation values for experiments: transfer learning with standardised images; mixed set training from scratch; and transfer learning with more images.

Supplementary Table S1. From IBSSR to MICCAI 2012 dataset. Average DSC and standard deviation results. All images from both datasets are intensity normalised to the mean MICCAI 2012 histogram and transformed into MNI space. TL X – transfer learning with X number of target volumes. No TL – tested directly on the model trained with MICCAI 2012 dataset. Structure acronyms are: left thalamus (Tha.L), right thalamus (Tha.R), left caudate (Cau.L), right caudate (Cau.R), left putamen (Put.L), right putamen (Put.R), left pallidum (Pal.L), right pallidum (Pal.R), left hippocampus (Hip.L), right hippocampus (Hip.R), left amygdala (Amy.L), right amygdala (Amy.R), left accumbens (Acc.L), right accumbens (Acc.R), average value (Avg.) and weighted average DSC (wAvg.)

Supplementary Figure S1. Overall weighted average DSC results for (a) MICCAI 2012 and (b) IBSR datasets. The results are shown for seven iterations of transfer learning with original images, training from scratch, transfer learning with standardised images, mixed set training. The horizontal lines correspond to the results of FIRST, full training, and the results of testing standardised images without transfer learning. Training volumes in each iteration for all cases are the same.
