## 1 Motivation and Introduction

## 2 Implementation

## 3 W3DS - Operations

## 4 W3DS in action

## 5 Conclusions

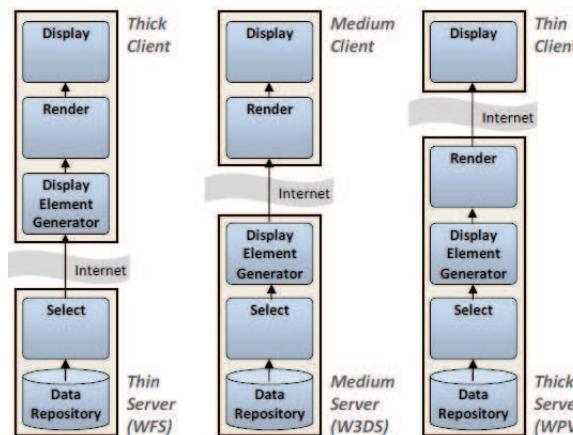

Motivation and Introduction  
Implementation  
W3DS - Operations  
W3DS in action  
Conclusions

## Motivation

- The availability of 3D data “on demand”, through a service
  - The development of web clients where 3D data can be fully explored, while minimizing data communication
- Take advantage of the native WebGL support in recent browsers
  - No plug ins are necessary to see 3D in browsers
  - Browsers can be as fast as any native application to render 3D graphics
- Create and share a reference implementation of the W3DS draft
  - This implementation can be used for interoperability tests to improve the specification

## Introduction

### OGC visualization models

Motivation and Introduction  
Implementation

W3DS in action  
Conclusions

## Built on top of existing open source software stacks

- Built on top of GeoServer
  - Previous experience with GeoServer
- Advantages
  - Web Services protocol already implemented
  - Common GIS formats already supported
  - An extensible architecture
- Disadvantages
  - High initial difficulty (Maven, JAVA Spring development framework, Apache Wicket)
  - GeoServer dependencies (GeoTools for example)
  - Scarce developers documentation

## Main implementation tasks

- Register the W3DS service in the GeoServer architecture
  - Each operation implementation have three major steps:
    - Parse and represent the request
    - Execute it
    - Write the result in the requested output format
  - Add the X3D as a new supported format
  - Update the GeoServer Web interface accordingly to the W3DS requirements
  - Extend GeoTools support (PostGIS, styles, etc)

- file:videos/Predios\_Camaras\_Conductas.mpeg

Motivation and Introduction  
Implementation  
W3DS - Operations  
W3DS in action  
Conclusions

## Conclusions

- W3DS is necessary for 3D WebGIS applications as WMS has been for web mapping
- W3DS (open source) implementations are necessary to do interoperability experiments
- A fully operational W3DS implementation was presented
- The service can be downloaded (as WAR) or as source for local deployment
- A working demo service is available at  
<http://3dwebgis.di.uminho.pt/geoserver3D/>
