

Projecte/Treball Fi de Carrera

Estudi: Enginyeria Informàtica. Pla 1997

Títol: LHMC: Un centre multimèdia Linux

Document: Annex: Documentació de l'aplicació.

Alumne: Cristina Roura Claver

Director/Tutor: Teodor Jové Lagunas

Departament: Electrònica, Informàtica i Automàtica

Àrea: Arquitectura i Tecnologia de Computadors

Convocatòria (mes/any): 09/2007

Annex. Documentació API de l'aplicació.

Aquest document és un annex de la memòria LHCM: Un centre multimèdia Linux. A continuació es mostra la documentació generada amb l'eina javadoc a partir de les classes del codi font de l'aplicació LHMC desenvolupada. La documentació de les classes que es mostra seguidament està agrupada pels *packages* que aquestes formen.

1. Package lhmc.files

lhmc.files

Class ImageFileFilter

```
java.lang.Object  
└ lhmc.files.ImageFileFilter
```

All Implemented Interfaces:

java.io.FileFilter

```
public class ImageFileFilter extends java.lang.Object implements java.io.FileFilter
```

ImageFileFilter is an instance of the FileFilter interface Accept all directories and image formats that our plugins can display.

Version:

0.01 Jul 2007

Author:

Cristina Roura Claver

Constructor Detail

ImageFileFilter

```
public ImageFileFilter()
```

Method Detail

accept

```
public boolean accept(java.net.URLurl)
```

Accept all directories and all bmp, gif, jpeg, jpg, png or wbmp files.

Parameters:

url - The URL to accept.

Returns:

True if its accepted.

accept

```
public boolean accept(java.io.Filefile)
```

Accept all directories and all bmp, gif, jpeg, jpg, png or wbmp files.

Specified by:

accept in interface `java.io.FileFilter`

Parameters:

file - The file to accept.

Returns:

True if its accepted.

accept

```
public boolean accept(SmbFilefile)
```

Accept all directories and all bmp, gif, jpeg, jpg, png or wbmp files.

Specified by:

accept in interface `java.io.FileFilter`

Parameters:

file - The smbfile to accept.

Returns:

True if its accepted.

lhmc.files

Class AudioFileFilter

```
java.lang.Object  
└ lhmc.files.AudioFileFilter
```

All Implemented Interfaces:

```
java.io.FileFilter
```

```
public class AudioFileFilter extends java.lang.Object implements java.io.FileFilter
```

AudioFileFilter is an instance of the FileFilter interface Accept all directories and image formats that our plugins can display.

Author:

Cristina Roura Claver

Constructor Detail

AudioFileFilter

```
public AudioFileFilter()
```

Method Detail

accept

```
public boolean accept(java.net.URLurl)
```

Accept all directories and all mp3, ogg, flac, MONKEY's AUDIO, WAV, AIFF, AU and SPEEX audio formats.

Parameters:

`url` - The url to accept.

Returns:

True if its accepted.

accept

```
public boolean accept(java.io.Filefile)
```

Accept all directories and all mp3, ogg, flac, MONKEY's AUDIO, WAV, AIFF, AU and SPEEX audio formats.

Specified by:

accept in interface `java.io.FileFilter`

Parameters:

`file` - The file to accept.

Returns:

True if its accepted.

accept

```
public boolean accept(SmbFilefile)
```

Accept all directories and all mp3, ogg, flac, MONKEY's AUDIO, WAV, AIFF, AU and SPEEX audio formats.

Specified by:

accept in interface `java.io.FileFilter`

Parameters:

`file` - The SmbFile to accept.

Returns:

True if its accepted.

lhmc.files

Class VideoFileFilter

```
java.lang.Object  
└ lhmc.files.VideoFileFilter
```

All Implemented Interfaces:

```
java.io.FileFilter
```

```
public class VideoFileFilter extends java.lang.Object implements java.io.FileFilter
```

VideoFileFilter is an instance of the FileFilter interface Accept all directories and image formats that our plugins can display.

Author:

Cristina Roura Claver

Constructor Detail

VideoFileFilter

```
public VideoFileFilter()
```

Method Detail

accept

```
public boolean accept(java.net.URL url)
```

Accept all directories and all mpg, mpeg, m1v, bin(VCD/SVCD Images), vob, avi, divx, mov, qt, asf, viv, rm, wmv, ogm, mkv, fli, flc and mvv formats. This are all formats supported by Mplayer.

Parameters:

url - The URL to accept.

Returns:

True if its accepted.

accept

```
public boolean accept(java.io.Filefile)
```

Accept all directories and all mpg, mpeg, m1v, bin(VCD/SVCD Images), vob, avi, divx, mov, qt, asf, viv, rm, wmv, ogm, mkv, fli, flc and mvv formats. This are all formats suported by Mplayer.

Specified by:

accept in interface `java.io.FileFilter`

Parameters:

`file` - The file to accept.

Returns:

True if its accepted.

accept

```
public boolean accept(SmbFilefile)
```

Accept all directories and all mpg, mpeg, m1v, bin(VCD/SVCD Images), vob, avi, divx, mov, qt, asf, viv, rm, wmv, ogm, mkv, fli, flc and mvv formats. This are all formats suported by Mplayer.

Specified by:

accept in interface `java.io.FileFilter`

Parameters:

`file` - The smbfile to accept.

Returns:

True if its accepted.

lhmc.files

Class SuportedFilesFileFilter

```
java.lang.Object  
└ lhmc.files.SuportedFilesFileFilter
```

All Implemented Interfaces:

```
java.io.FileFilter
```

```
public class SuportedFilesFileFilter extends java.lang.Object implements  
java.io.FileFilter
```

SuportedFilesFileFilter is an instance of the FileFilter interface Accept all directories and image, audio and video formats that our plugins can display.

Author:

Cristina Roura Claver

Constructor Detail

SuportedFilesFileFilter

```
public SuportedFilesFileFilter()
```

Method Detail

accept

```
public boolean accept(java.net.URLurl)
```

Accept all directories and all fileformats accepted by the image, audio and video filefilters.

Parameters:

url - The URL to accept.

Returns:

True if its accepted.

accept

```
public boolean accept(java.io.Filefile)
```

Accept all directories and all fileformats accepted by the image, audio and video filefilters.

Specified by:

accept in interface `java.io.FileFilter`

Parameters:

`file` - The file to accept.

Returns:

True if its accepted.

accept

```
public boolean accept(SmbFilefile)
```

Accept all directories and all fileformats accepted by the image, audio and video filefilters.

Specified by:

accept in interface `java.io.FileFilter`

Parameters:

`file` - The SmbFile to accept.

Returns:

True if its accepted.

lhmc.files

Class FileManager

```
java.lang.Object  
└ lhmc.files.FileManager
```

```
public class FileManager extends java.lang.Object
```

FileManager uses the SortedTreeNode class to keep que current directory (with filtered files) in order.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

Constructor Detail

FileManager

```
public FileManager(java.net.URL[] files)
```

Constructs the file manager from a URL array.

Parameters:

files - The array of URLs to create the tree with.

Method Detail

getUrlType

```
public int getUrlType()
```

Gets the url type, it can be File or SmbFile

changeTreeNode

```
public void changeTreeNode(java.net.URL[]files)
```

Changes to a new URL array and the tree node.

Parameters:

files - The new array of URLs to create the tree with.

isDirectoryName

```
public boolean isDirectoryName(intindex)
```

Returns true if at the index position there is a directory.

Parameters:

index - The index position of a node.

Returns:

true if at the index position there is a directory.

getNodesNumber

```
public int getNodesNumber()
```

Gets the number of nodes of the sorted tree.

Returns:

The number of nodes.

getFileNameAt

```
public java.lang.String getFileNameAt(intindex)
```

Gets the file path of a node at index position.

Parameters:

index - The index position of a node.

Returns:

The file path.

getFileAt

```
public java.net.URL getFileAt(int index)
```

Gets the URL at the certain position of the tree.

Parameters:

index - The position of the URL in the tree.

Returns:

The file.

lhmc.files

Class SortedTreeNode

```
java.lang.Object
└ javax.swing.tree.DefaultMutableTreeNode
    └ lhmc.files.SortedTreeNode
```

All Implemented Interfaces:

java.io.Serializable, java.lang.Cloneable, javax.swing.tree.MutableTreeNode,
javax.swing.tree.TreeNode

```
public class SortedTreeNode extends javax.swing.tree.DefaultMutableTreeNode
```

SortedTreeNode: a mutable tree node with alphabetically sorted children

See Also:

[Serialized Form](#)

Constructor Detail

SortedTreeNode

```
public SortedTreeNode(int fileType)
```

Constructs a SortedTreeNode, specifying the filesystem location.

Parameters:

`fileType` - remote or local file type

SortedTreeNode

```
public SortedTreeNode(java.lang.Object userObject)
```

Constructs a SortedTreeNode with a root node as an argument.

Parameters:

`userObject` - the object root node.

Method Detail

getIndex

```
public int getIndex()
```

Gets the index of the sortedTreeNode.

Returns:

the index of the treeNode.

setIndex

```
public void setIndex(int index)
```

Gets the index of the sortedTreeNode.

Parameters:

index - the index of the treeNode.

add

```
public void add(SortedTreeNode child)
```

Adds a TreeNode to the child list.

Parameters:

child - the SortedTreeNode to add.

}

lhmc.files

Class UrlUtils

```
java.lang.Object  
└ lhmc.files.UrlUtils
```

```
public class UrlUtilsextends java.lang.Object
```

UrlUtils helps the url files that can contain a File or a SmbFile.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

Constructor Detail

UrlUtils

```
public UrlUtils()
```

Constructs the UrlUtils class.

UrlUtils

```
public UrlUtils(int filesystemLocation)
```

Constructs the UrlUtils class specifying the filesystem location.

Parameters:

`filesystemLocation` - the filesystem location.

UrlUtils

```
public UrlUtils(java.net.URLurl)
```

Constructs the UrlUtils and searches which filesystem location has the URL.

Parameters:

url - the url file.

Method Detail

getUrlName

```
public java.lang.String getUrlName(java.net.URLurl)
```

Gets the name of the file.

Parameters:

url - the url file.

Returns:

the name of the file.

getLocation

```
public int getLocation(java.net.URLurl)
```

Gets the location (remote or local) of the file.

Parameters:

url - the url file.

Returns:

the location.

getLocation

```
public int getLocation()
```

Gets the location attribute (remote or local).

Returns:

the location.

isUrlDirectory

```
public boolean isUrlDirectory(java.net.URLurl)
```

Tests whether the file is a directory.

Returns:

true if it is a directory.

getSmbFile

```
public SmbFile getSmbFile(java.net.URLurl)
```

Extracts the SmbFile of a URL.

Parameters:

url - the url file.

Returns:

the SmbFile.

getFile

```
public java.io.File getFile(java.net.URLurl)
```

Extracts the File of a URL.

Parameters:

url - the url file.

Returns:

the File.

getURLParent

```
public java.net.URL getURLParent(java.net.URLurl)
```

Returns the pathname string of this abstract pathname's parent, or null if this pathname does not name a parent directory.

Parameters:

url - the url file.

Returns:

the parent url file.

getAbsolutePath

```
public java.lang.String getAbsolutePath(java.net.URLurl)
```

Returns the absolute pathname string of this abstract pathname.

Parameters:

url - the url file.

Returns:

the absolute path name string.

getPath

```
public java.lang.String getPath(java.net.URLurl)
```

Converts the url file abstract pathname into a pathname string.

Parameters:

url - the url file.

Returns:

The string form of this abstract pathname.

getFilteredUrls

```
public java.net.URL[] getFilteredUrls(java.net.URLrootFile,  
                                     java.io.FileFiltercustomFileFilter)
```

Returns an array of url files and directories that satisfy the specified filter.

Parameters:

rootFile - the url directory to list.
customFileFilter - the file filter.

Returns:

an array of url files.

createUrl

```
public java.net.URL createURL(java.lang.Stringpath)
```

Creates an URL file from a file path

Parameters:

path - the file path.

Returns:

an url file.

lhmc.files

Class CopyManager

```
java.lang.Object  
└ lhmc.files.CopyManager
```

```
public class CopyManager extends java.lang.Object
```

CopyManager manages the copy of files between difrent locations. It can copy: from local to local. from local to remote. from remote to local. from remote to remote.

Author:

Cristina Roura Claver

Constructor Detail

CopyManager

```
public CopyManager(java.lang.String actualLocation, java.lang.String locationToCopy,  
                   java.lang.String locationToCopyType, java.lang.String localPathToCopy,  
                   java.lang.String mediaType, java.io.FileFilter customFileFilter)
```

Constructor of CopyManager

Parameters:

- actualLocation** - the location where the files to copy lay.
- locationToCopy** - the location where the files would be copied.
- locationToCopyType** - the type of the location to copy.
- localPathToCopy** - the path where the files would be copied.
- mediaType** - the type of media files to copy.
- customFileFilter** - the filefilter to apply.

Method Detail

copyFiles

```
public void copyFiles(java.util.Vector<java.net.URL>filesToCopy,  
                      java.lang.StringdirectoryToCopy)
```

Copies a vector of url files to a directory.

Parameters:

filesToCopy - the vector of url files to copy.

directoryToCopy - the directory to copy the files.

lhmc.files

Class CopyTo

```
java.lang.Object
└ java.lang.Thread
    └ lhmc.files.CopyTo
```

All Implemented Interfaces:

java.lang.Runnable

```
public class CopyTo extends java.lang.Thread
```

CopyTo is a threaded class that manages the copy of files from remote filesystem (SmbFile) to local filesystem (File) and vice versa. Also manages to copy from remote to remote filesystem or local to local filesystem.

Version:

0.01 20 Jun 2007

Author:

Cristina Roura Claver

Constructor Detail

CopyTo

```
public CopyTo(java.io.File srcFile,
             java.io.File destFile)
```

Constructor that creates the input and output stream from source file and destination file.

Parameters:

srcFile - the source file.
destFile - the destination file.

CopyTo

```
public CopyTo(java.io.FilesrcFile,  
               SmbFiledestFile)
```

Constructor that creates the input and output stream from source file and destination smbfile.

Parameters:

srcFile - the source file.
destFile - the destination smbfile.

See Also:

[SmbFile](#)

CopyTo

```
public CopyTo(SmbFilesrcFile,  
               SmbFiledestFile)
```

Constructor that creates the source and destination smbfile.

Parameters:

srcFile - the source smbfile.
destFile - the destination smbfile.

See Also:

[SmbFile](#)

CopyTo

```
public CopyTo(SmbFilesrcFile,  
               java.io.FiledestFile)
```

Constructor that creates the input and output stream from source smbfile and destination file.

Parameters:

srcFile - the source smbfile.
destFile - the destination file.

See Also:

[SmbFile](#)

Method Detail

run

`public void run()`

Executes the copy of the files.

Specified by:

`run` in interface `java.lang.Runnable`

Overrides:

`run` in class `java.lang.Thread`

2. Package lhmc.network

lhmc.network

Class HostsVector

```
java.lang.Object  
└ lhmc.network.HostsVector
```

```
public class HostsVector extends java.lang.Object
```

HostsVector is class manages a hostname vector.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

Constructor Detail

HostsVector

```
public HostsVector()
```

HostsVector constructor.

Method Detail

addHost

```
public void addHost(java.lang.String hostName)
```

Adds a hostname string to the vector. Synchronized method to be used by threads.

Parameters:

hostName - the host name.

getHosts

```
public java.util.Vector<java.lang.String> getHosts()
```

Gets the hostname vector. Synchronized method to be used by threads.

Returns:

the host names vector.

lhmc.network

Class HostListener

```
java.lang.Object  
└ lhmc.network.HostListener
```

All Implemented Interfaces:

java.lang.Runnable

```
public class HostListener extends java.lang.Object implements java.lang.Runnable
```

HostListener is a threaded class that listens for a multicast messages and when a multicast message arrive sends the hostname.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

Constructor Detail

HostListener

```
public HostListener()
```

Method Detail

run

```
public void run()
```

Executes the HostListener thread.

Specified by:

run in interface java.lang.Runnable

lhmc.network

Class SendHostName

```
java.lang.Object  
└ lhmc.network.SendHostName
```

All Implemented Interfaces:

java.lang.Runnable

```
public class SendHostName extends java.lang.Object implements java.lang.Runnable
```

SendHostName is a threaded class that sends a host name to the host that has made the petition.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

Constructor Detail

SendHostName

```
public SendHostName(java.net.InetAddress serverAddress,  
                    int port)
```

SendHostName constructor.

Parameters:

serverAddress - the address to send the new packet.
port - the port to send the new packet.

Method Detail

run

```
public void run()
```

Executes the SendHostName thread.

Specified by:

run in interface `java.lang.Runnable`

}

lhmc.network

Class HostsSearch

```
java.lang.Object  
└ lhmc.network.HostsSearch
```

All Implemented Interfaces:

java.lang.Runnable

```
public class HostsSearch extends java.lang.Object implements java.lang.Runnable
```

HostsSearch is a threaded class that sends a multicast message and waits for responses. If there is a response saves the host name received to a HostsVector.

Author:

Cristina Roura Claver

Constructor Detail

HostsSearch

```
public HostsSearch(HostsVectorhostsVector)
```

HostsSearch constructor.

Parameters:

hostsVector - the hostvector to fill.

Method Detail

run

```
public void run()
```

Executes the HostsSearch thread.

Specified by:

run in interface `java.lang.Runnable`

lhmc.network

Class ReceiveHostName

```
java.lang.Object
└ lhmc.network.ReceiveHostName
```

All Implemented Interfaces:

java.lang.Runnable

```
public class ReceiveHostName extends java.lang.Object implements java.lang.Runnable
```

ReceiveHostName is a threaded class that manages the received packet with the hostname.

Author:

Cristina Roura Claver

Constructor Detail

ReceiveHostName

```
public ReceiveHostName(java.net.Socket socket,
                      HostsVector hostsVector)
```

ReceiveHostName constructor.

Parameters:

socket - the socket that receives the packet.

hostsVector - the hostsVector to be filled.

Method Detail

run

```
public void run()
```

Executes the ReceiveHostName thread.

Specified by:

run in interface [java.lang.Runnable](#)

3. Package lhmc.plugins

lhmc.plugins

Class PluginFactory

```
java.lang.Object  
└ lhmc.plugins.PluginFactory
```

```
public class PluginFactory extends java.lang.Object
```

PluginFactory decides which plugin must be executed depending on the file type of the given file.

Version:

0.01 Mar 2007

Author:

Cristina Roura Claver

Constructor Detail

PluginFactory

```
public PluginFactory()
```

Method Detail

getPlugin

```
public Plugin getPlugin(java.net.URLurl)
```

Returns the plugin suitable to execute the given file.

Parameters:

url - the url file to execute.

Returns:

the plugin to use for executing the file.

getPlugin

```
public Plugin getPlugin(int cdType)
```

Returns the plugin suitable to execute the given cdType.

Parameters:

cdType - the cdType to execute.

Returns:

the plugin to use for executing the cd or dvd.

figureOutFileType

```
public int figureOutFileType(java.io.File file)
```

Figures out the type of file.

Parameters:

file - the file to get the type.

Returns:

an integer that matches d.

figureOutFileType

```
public int figureOutFileType(SmbFile smbFile)
```

Figures out the type of file.

Parameters:

smbFile - the smbfile to get the type.

Returns:

an integer that matches d.

lhmc.plugins

Class Plugin

```
java.lang.Object  
└ lhmc.plugins.Plugin
```

Direct Known Subclasses:

[BasicPlayerPlugin](#), [CddaMPlayerPlugin](#), [CddaPlayerPlugin](#), [DvbMPlayerPlugin](#),
[DvdXinePlugin](#), [ImagePlugin](#), [MencoderPlugin](#), [MPlayerPlugin](#), [TvMPlayerPlugin](#)

```
public abstract class Plugin extends java.lang.Object
```

Plugin abstract class. Must overide the run method.

Version:

0.01 Mar 2007

Author:

Cristina Roura Claver

Field Detail

mainFrame

```
protected LHMCGUI mainFrame
```

backupFrame

```
protected LHMCGUI backupFrame
```

Constructor Detail

Plugin

```
public Plugin()
```

Method Detail

play

```
public abstract void play(java.net.URLfile)
```

Executes a file.

Parameters:

file - the url file to execute.

playAll

```
public abstract void playAll(java.net.URLfile)
```

Executes a directory.

Parameters:

file - the url directory to execute.

setMainFrame

```
public void setMainFrame(LHMCGUImainFrame)
```

Sets the main frame to mainFrame.

Parameters:

mainFrame - The main frame of the LHMCGUI.

}

lhmc.plugins**Class ImagePlugin**

```
java.lang.Object
└ lhmc.plugins.Plugin
    └ lhmc.plugins.ImagePlugin
```

All Implemented Interfaces:

java.awt.event.KeyListener, java.util.EventListener

```
public class ImagePlugin extends Plugin implements java.awt.event.KeyListener
```

ImagePlugin executes a single image file and shows it in fullscreen and executes a directory and make a slideshow from all the images in that directory.

Version:

0.01 Mar 2007

Author:

Cristina Roura Claver

Field Detail**device**

```
protected java.awt.GraphicsDevice device
```

mainWindow

```
protected java.awt.Window mainWindow
```

ss

```
protected SlideShow ss
```

Method Detail

play

```
public void play(java.net.URLfile)
```

Shows the scaled image in fullscreen.

Specified by:

[play](#) in class [Plugin](#)

Parameters:

file - the image URL to show.

playAll

```
public void playAll(java.net.URLfile)
```

Shows a slideshow of a directory in fullscreen.

Specified by:

[playAll](#) in class [Plugin](#)

Parameters:

file - the URL directory to make the slideshow.

keyPressed

```
public void keyPressed(java.awt.event.KeyEvent)
```

Handles the keyPressed event by invoking the keyPressed methods on listener-a and listener-b.

Specified by:

[keyPressed](#) in interface [java.awt.event.KeyListener](#)

Parameters:

e - the key event.

keyReleased

```
public void keyReleased(java.awt.event.KeyEvent e)
```

Handles the keyReleased event by invoking the keyReleased methods on listener-a and listener-b.

Specified by:

keyReleased in interface `java.awt.event.KeyListener`

Parameters:

`e` - the key event.

keyTyped

```
public void keyTyped(java.awt.event.KeyEvent e)
```

Handles the keyTyped event by invoking the keyTyped methods on listener-a and listener-b.

Specified by:

keyTyped in interface `java.awt.event.KeyListener`

Parameters:

`e` - the key event.

lhmc.plugins

Class ScaledImageJComponent

```
java.lang.Object
└ java.awt.Component
    └ java.awt.Container
        └ javax.swing.JComponent
            └ lhmc.plugins.ScaledImageJComponent
```

```
public class ScaledImageJComponent extends javax.swing.JComponent
```

ScaledImageJComponent reads an image file and resizes it to fit fullscreen mantaining its ratio. Image I/O has built-in support for GIF, PNG, JPEG, BMP, and WBMP.

Author:

Cristina Roura Claver

Constructor Detail

ScaledImageJComponent

```
public ScaledImageJComponent()
```

Constructs a null scaled image.

ScaledImageJComponent

```
public ScaledImageJComponent(java.net.URLfile)
```

Constructs a scaled image from a file.

Parameters:

file - the url image to read.

ScaledImageJComponent

```
public ScaledImageJComponent(java.lang.Stringstr)
```

Constructs a scaled image from a string path.

Parameters:

str - the srt of the image to read.

Method Detail

setImage

```
public void setImage(java.lang.Stringstr)
```

Creates a scaled image from a strig path.

Parameters:

str - The path of the image.

getPreferredSize

```
public java.awt.Dimension getPreferredSize()
```

Gets the preferred size.

Overrides:

getPreferredSize in class javax.swing.JComponent

Returns:

The screen size.

paintScaledImage

```
public void paintScaledImage(java.awt.Graphicsg)
```

Invoques the paintComponent method.

Parameters:

g - the Graphics context.

paintComponent

protected void paintComponent(java.awt.Graphicsg)

Reimplementation of paintComponent to paint the img.

Overrides:

paintComponent in class javax.swing.JComponent

Parameters:

g - the Graphics context.

lhmc.plugins

Class SlideShow

```
java.lang.Object
└ java.awt.Component
    └ java.awt.Container
        └ javax.swing.JComponent
            └ javax.swing.JPanel
                └ lhmc.plugins.SlideShow
```

All Implemented Interfaces:

```
java.awt.image.ImageObserver, java.awt.MenuContainer, java.io.Serializable,
java.lang.Runnable, javax.accessibility.Accessible
```

```
public class SlideShow extends javax.swing.JPanel implements java.lang.Runnable
```

Slideshow is a threaded class that shows images in fullscreen form a directory.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Constructor Detail

SlideShow

```
public SlideShow(java.net.URLfile)
```

Constructs SlideShow managing the files from the directory.

Parameters:

file - the url file directory to do the slideshow

Method Detail

run

```
public void run()
```

Executes the slideshow, showing an image each MILISECONDS.

Specified by:

run in interface `java.lang.Runnable`

start

```
public void start()
```

Starts the thread calling the run method.

stop

```
public void stop()
```

Stops the thread avoiding deadlock-prone.

paintComponent

```
public void paintComponent(java.awt.Graphicsg)
```

Invoques the paintComponent method.

Overrides:

paintComponent in class `javax.swing.JComponent`

Parameters:

`g` - the Graphics context.

lhmc.plugins

Class BasicPlayerPlugin

```
java.lang.Object
└ lhmc.plugins.Plugin
    └ lhmc.plugins.BasicPlayerPlugin
```

All Implemented Interfaces:

java.awt.event.FocusListener, java.awt.event.KeyListener, java.util.EventListener

```
public class BasicPlayerPlugin extends Plugin implements
java.awt.event.KeyListener, java.awt.event.FocusListener
```

BasicPlayerPlugin executes a single sound file or a directory of files making a playlist. When a file is played a play panel is showed. It supports MP3, OGG Vorbis, FLAC, MONKEY's AUDIO, WAV, AIFF, AU and SPEEX audio formats.

Version:

0.01 Mar 2007

Author:

Cristina Roura Claver

Field Detail

player

```
protected BasicPlayer player
```

currentItem

```
protected PlaylistItem currentItem
```

audioInfo

```
protected java.util.Map audioInfo
```

positonValue

```
protected float positonValue
```

volume

```
protected double volume
```

isPaused

```
protected boolean isPaused
```

isMuted

```
protected boolean isMuted
```

Constructor Detail

BasicPlayerPlugin

```
public BasicPlayerPlugin()
```

Constructs the basic player plugin.

Method Detail

play

```
public void play(java.net.URLurl)
```

Shows the play panel and plays a single song.

Specified by:

[play](#) in class [Plugin](#)

Parameters:

`url` - the song to play.

playAll

```
public void playAll(java.net.URLfile)
```

Shows the play panel and creates a playlist for all the songs in the current directory, and plays one by one.

Specified by:

[playAll](#) in class [Plugin](#)

Parameters:

`file` - the songs directory to play.

run

```
public void run(java.net.URLurlFile)
```

Starts to play a song.

Parameters:

`urlFile` - the song file.

opened

```
public void opened(java.lang.Object stream,  
                  java.util.Map properties)
```

Open callback, stream is ready to play. properties map includes audio format dependant features such as bitrate, duration, frequency, channels, number of frames, vbr flag, id3v2/id3v1 (for MP3 only), comments (for Ogg Vorbis), ...

Parameters:

stream - could be File, URL or InputStream
properties - audio stream properties.

progress

```
public void progress(int bytesread,  
                     long microseconds,  
                     byte[] pcldata,  
                     java.util.Map properties)
```

Progress callback while playing. This method is called severals time per seconds while playing. properties map includes audio format features such as instant bitrate, microseconds position, current frame number, ...

Parameters:

bytesread - from encoded stream.
microseconds - elapsed (**reseted after a seek !**).
pcldata - PCM samples.
properties - audio stream parameters.

stateUpdated

```
public void stateUpdated(BasicPlayerEvent event)
```

Notification callback for basicplayer events such as opened, eom ...

Parameters:

event -

setController

```
public void setController(BasicController controller)
```

A handle to the BasicPlayer, plugins may control the player through the controller (play, stop, ...)

Parameters:

controller - : a handle to the player

display

```
public void display(java.lang.String msg)
```

Displays a message.

Parameters:

msg - A string of the message.

focusGained

```
public void focusGained(java.awt.event.FocusEvent e)
```

Specified by:

focusGained in interface java.awt.event.FocusListener

focusLost

```
public void focusLost(java.awt.event.FocusEvent e)
```

Specified by:

focusLost in interface java.awt.event.FocusListener

keyPressed

```
public void keyPressed(java.awt.event.KeyEvent)
```

Specified by:

keyPressed in interface java.awt.event.KeyListener

keyReleased

```
public void keyReleased(java.awt.event.KeyEvent)
```

Specified by:

keyReleased in interface java.awt.event.KeyListener

keyTyped

```
public void keyTyped(java.awt.event.KeyEvent)
```

Specified by:

keyTyped in interface java.awt.event.KeyListener

lhmc.plugins**Class ExternalPlugin**

```
java.lang.Object  
└ lhmc.plugins.ExternalPlugin
```

All Implemented Interfaces:

java.lang.Runnable

```
public class ExternalPlugin extends java.lang.Object implements java.lang.Runnable
```

ExternalPlugin executes a command to run a non-java external plugin.

Version:

0.01 Jul 2007

Author:

Cristina Roura Claver

Method Detail**executeCommand**

```
public java.lang.Process executeCommand()
```

Executes the command.

Returns:

Process the process in execution.

setCommand

```
public void setCommand(java.lang.String[] command)
```

Sets the command string.

Parameters:

command - the command string.

run

```
public void run()
```

Executes this thread.

Specified by:

run in interface `java.lang.Runnable`

start

```
public void start()
```

Starts the thread calling the run method.

stop

```
public void stop()
```

Stops the thread avoiding deadlock-prone.

lhmc.plugins**Class MPlayerPlugin**

```
java.lang.Object
└ lhmc.plugins.Plugin
    └ lhmc.plugins.MPlayerPlugin
```

```
public class MPlayerPlugin extends Plugin
```

MPlayerPlugin executes a single video file in fullscreen

Version:

0.01 29 Mar 2007

Author:

Cristina Roura Claver

Field Detail**device**

```
protected java.awt.GraphicsDevice device
```

mainWindow

```
protected java.awt.Window mainWindow
```

Method Detail

play

```
public void play(java.net.URLfile)
```

Plays a video file.

Specified by:

[play](#) in class [Plugin](#)

Parameters:

`file` - the url video file to execute.

playAll

```
public void playAll(java.net.URLfile)
```

Description copied from class: [Plugin](#)

Executes a directory.

Specified by:

[playAll](#) in class [Plugin](#)

Parameters:

`file` - the url directory to execute.

lhmc.plugins**Class CddaMPlayerPlugin**

```
java.lang.Object
└ lhmc.plugins.Plugin
    └ lhmc.plugins.CddaMPlayerPlugin
```

All Implemented Interfaces:

java.awt.event.FocusListener, java.awt.event.KeyListener, java.util.EventListener

```
public class CddaMPlayerPlugin extends Plugin implements
java.awt.event.KeyListener, java.awt.event.FocusListener
```

CddaMPlayerPlugin plays an audio CD with MPlayer

Version:

0.01 Mar 2007

Author:

Cristina Roura Claver

Field Detail**device**

```
protected java.awt.GraphicsDevice device
```

mainWindow

```
protected java.awt.Window mainWindow
```

Method Detail

play

```
public void play(java.net.URLfile)
```

Shows the play panel and plays the first track of an audio Cd.

Specified by:

[play](#) in class [Plugin](#)

Parameters:

`file` - not in use.

generateCommand

```
public java.lang.String[] generateCommand()
```

Creates the command to be executed.

Returns:

the command string.

playAll

```
public void playAll(java.net.URLfile)
```

Description copied from class: [Plugin](#)

Executes a directory.

Specified by:

[playAll](#) in class [Plugin](#)

Parameters:

`file` - the url directory to execute.

focusGained

```
public void focusGained(java.awt.event.FocusEvent)
```

Specified by:

focusGained in interface java.awt.event.FocusListener

focusLost

```
public void focusLost(java.awt.event.FocusEvent)
```

Specified by:

focusLost in interface java.awt.event.FocusListener

keyPressed

```
public void keyPressed(java.awt.event.KeyEvent)
```

Specified by:

keyPressed in interface java.awt.event.KeyListener

keyReleased

```
public void keyReleased(java.awt.event.KeyEvent)
```

Specified by:

keyReleased in interface java.awt.event.KeyListener

keyTyped

```
public void keyTyped(java.awt.event.KeyEvent)
```

Specified by:

keyTyped in interface java.awt.event.KeyListener

lhmc.plugins**Class DvdXinePlugin**

```
java.lang.Object  
└ lhmc.plugins.Plugin  
  └ lhmc.plugins.DvdXinePlugin
```

```
public class DvdXinePlugin extends Plugin
```

DvdXinePlugin reproduces a video DVD with Xine.

Version:

0.01 29 Mar 2007

Author:

Cristina Roura Claver

Field Detail**device**

```
protected java.awt.GraphicsDevice device
```

mainWindow

```
protected java.awt.Window mainWindow
```

Method Detail

play

```
public void play(java.net.URLfile)
```

Plays the DVD.

Specified by:

[play](#) in class [Plugin](#)

Parameters:

`file` - not used.

playAll

```
public void playAll(java.net.URLfile)
```

Description copied from class: [Plugin](#)

Executes a directory.

Specified by:

[playAll](#) in class [Plugin](#)

Parameters:

`file` - the url directory to execute.

lhmc.plugins**Class DvbMPlayerPlugin**

```
java.lang.Object  
└ lhmc.plugins.Plugin  
  └ lhmc.plugins.DvbMPlayerPlugin
```

```
public class DvbMPlayerPlugin extends Plugin
```

DvbMPlayerPlugin displays the digital TV with MPlayer.

Version:

0.01 29 Mar 2007

Author:

Cristina Roura Claver

Field Detail**device**

```
protected java.awt.GraphicsDevice device
```

mainWindow

```
protected java.awt.Window mainWindow
```

Method Detail

play

```
public void play(java.net.URLfile)
```

Shows the television.

Specified by:

[play](#) in class [Plugin](#)

Parameters:

`file` - not used.

playAll

```
public void playAll(java.net.URLfile)
```

Description copied from class: [Plugin](#)

Executes a directory.

Specified by:

[playAll](#) in class [Plugin](#)

Parameters:

`file` - the url directory to execute.

Ihmcp.plugins

Class MencoderPlugin

```
java.lang.Object
└─ ihmcp.plugins.Plugin
    └─ ihmcp.plugins.MencoderPlugin
```

All Implemented Interfaces:

java.awt.event.ActionListener, java.awt.event.FocusListener, java.util.EventListener

```
public class MencoderPlugin extends Plugin implements java.awt.event.FocusListener,
java.awt.event.ActionListener
```

MencoderPlugin records television shows.

Version:

0.01 Mar 2007

Author:

Cristina Roura Claver

Field Detail

device

```
protected java.awt.GraphicsDevice device
```

mainWindow

```
protected java.awt.Window mainWindow
```

focusedButton

```
protected CustomButton focusedButton
```

Constructor Detail

MencoderPlugin

```
public MencoderPlugin()
```

Constructs MencoderPlugin. Shows a list of channels to choose which to record.

Method Detail

play

```
public void play(java.net.URLfile)
```

Shows the panel.

Specified by:

[play](#) in class [Plugin](#)

Parameters:

`file` - not used.

playAll

```
public void playAll(java.net.URLfile)
```

Description copied from class: [Plugin](#)

Executes a directory.

Specified by:

[playAll](#) in class [Plugin](#)

Parameters:

`file` - the url directory to execute.

actionPerformed

```
public void actionPerformed(java.awt.event.ActionEvent)
```

Invoked when the action button pressed occurs.

Specified by:

actionPerformed in interface java.awt.event.ActionListener

Parameters:

e - The action event

focusGained

```
public void focusGained(java.awt.event.FocusEvent)
```

Specified by:

focusGained in interface java.awt.event.FocusListener

focusLost

```
public void focusLost(java.awt.event.FocusEvent)
```

Specified by:

focusLost in interface java.awt.event.FocusListener

4. Package lhmc.utils

lhmc.utils

Class ConfigReader

```
java.lang.Object  
└ lhmc.utils.ConfigReader
```

```
public class ConfigReader extends java.lang.Object
```

ConfigReader reads the config file and gets it's properties.

Version:

0.01 Jul 2007

Author:

Cristina Roura Claver

Constructor Detail

ConfigReader

```
public ConfigReader()
```

Constructs ConfigReader.

Method Detail

getProperty

```
public java.lang.String getProperty(java.lang.String key)
```

Gets the property string from key string.

Parameters:

key - the key string.

Returns:

the property related to the key.

propertyNames

```
public java.util.Enumeration propertyNames()
```

Gets an enumeration on key Names

Returns:

the enumeration of keys.

loadColor

```
public java.awt.Color loadColor(java.lang.String colorType)
```

Gets the color from a colortype string.

Parameters:

colorType - the name of the color type to get.

Returns:

the Color required.

loadFont

```
public java.awt.Font loadFont(java.lang.String fontType)
```

Gets the font from a fontType string.

Parameters:

fontType - the name of the font type to get.

Returns:

the Font required.

lhmc.utils

Class OpticalDiscTypeFinder

```
java.lang.Object  
└ lhmc.utils.OpticalDiscTypeFinder
```

```
public class OpticalDiscTypeFinder extends java.lang.Object
```

OpticalDiscTypeFinder uses cdtool and dvd+rwtools to discover the disc type.

Version:

0.01 Jul 2007

Author:

Cristina Roura Claver

Constructor Detail

OpticalDiscTypeFinder

```
public OpticalDiscTypeFinder()
```

Constructs OpticalDiscTypeFinder

Method Detail

setDiscType

```
public void setDiscType(int type)
```

Sets the disc type

Parameters:

type - the disc type.

getDiscType

```
public int getDiscType()
```

Gets the disc type

Returns:

the disc type.

getOfType

```
public int getTypeOf(java.lang.Stringtype)
```

Gets the type identification from a string.

Parameters:

type - the disc string type.

Returns:

the disc type.

lhmc.utils**Class RemovableDevicesActivator**

```
java.lang.Object  
└ lhmc.utils.RemovableDevicesActivator
```

```
public class RemovableDevicesActivator extends java.lang.Object
```

RemovableDevicesActivator mounts the removable devices connected to the system. The mount is done automaticaly accecing to the devices by automount.

Version:

0.01 Jul 2007

Author:

Cristina Roura Claver

Constructor Detail**RemovableDevicesActivator**

```
public RemovableDevicesActivator(java.net.URLroot)
```

Constructs RemovableDevicesActivator

Parameters:

root - the root directory where the devices are mounted.

Method Detail**setDevicesRoot**

```
public void setDevicesRoot(java.net.URLroot)
```

Sets the devices root directory.

Parameters:

root - the root directory where the devices are mounted.

getDevicesRoot

```
public java.net.URL getDevicesRoot()
```

Gets the devices root directory.

Returns:

the root directory where the devices are mounted.

setRemovableDevices

```
public void setRemovableDevices(java.net.URL[] devicesList)
```

Sets the devices directories URL array.

Parameters:

devicesList - the devices directory URL array where each device is mounted.

getRemovableDevices

```
public java.net.URL[] getRemovableDevices()
```

Gets the devices directories URL array.

Returns:

the devices directory URL array where each device is mounted.

activatingUSBDevices

```
public void activatingUSBDevices()
```

Activates the removable devices acceding to the files.

5. Package lhmc.gui.plugingui

lhmc.gui.plugingui

Class PluginGUI

```
java.lang.Object
└ java.awt.Component
  └ java.awt.Container
    └ javax.swing.JComponent
      └ javax.swing.JPanel
        └ lhmc.gui.plugingui.PluginGUI
```

All Implemented Interfaces:

java.awt.event.FocusListener, java.awt.image.ImageObserver, java.awt.MenuContainer,
java.io.Serializable, java.util.EventListener, javax.accessibility.Accessible

Direct Known Subclasses:

[DVDCDJPanel](#), [Images JPanel](#), [Movies JPanel](#), [Music JPanel](#), [RemovableDev JPanel](#), [Tv JPanel](#)

```
public class PluginGUI extends javax.swing.JPanel implements
java.awt.event.FocusListener
```

Plugin GUI. Each plugin inherits from this class, that contains the basics for the plugin panel.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

See Also:

REMOTE_SMBFILE

```
protected static final int REMOTE_SMBFILE
```

See Also:[Constant Field Values](#)

focusedButton

```
protected CustomButton focusedButton
```

appTitle

```
protected java.lang.String appTitle
```

backButton

```
protected CustomButton backButton
```

Constructor Detail

PluginGUI

```
public PluginGUI()
```

Constructs a basic plugin panel.

Method Detail

createPanel

```
public void createPanel()
```

Creates the plugin panel.

getTitle

```
public java.lang.String getTitle()
```

Gets the title of the plugin.

Returns:

The title of the plugin.

setTitle

```
public void setTitle(java.lang.String title)
```

Sets the title of the plugin.

Parameters:

title - The title of the plugin.

getMediaUrl

```
public java.lang.String getMediaUrl()
```

Gets the files location.

Returns:

The files location.

setMediaUrl

```
public void setMediaUrl(java.lang.String url)
```

Sets the files location.

Parameters:

`url` - The files location.

setMainFrame

```
public void setMainFrame(LHMCGUI mainFrame)
```

Sets the main frame to mainFrame.

Parameters:

`mainFrame` - The main frame of the LHMCGUI.

getMainFrame

```
public LHMCGUI getMainFrame()
```

Gets the main frame to mainFrame.

Returns:

The main frame of the LHMCGUI.

See Also:

[LHMCGUI](#)

getPluginFactory

```
public PluginFactory getPluginFactory()
```

Gets the plugin factory.

Returns:

The plugin factory.

See Also:

[PluginFactory](#)

focusComponent

```
public void focusComponent()
```

Requests the focus for the initial focused component.

focusGained

```
public void focusGained(java.awt.event.FocusEvent)
```

Specified by:

focusGained in interface [java.awt.event.FocusListener](#)

focusLost

```
public void focusLost(java.awt.event.FocusEvent)
```

Specified by:

focusLost in interface [java.awt.event.FocusListener](#)

}

lhmc.gui.plugingui**Class ImagesJPanel**

```

java.lang.Object
└ java.awt.Component
  └ java.awt.Container

        └ lhmc.gui.plugingui.PluginGUI
          └ lhmc.gui.plugingui.ImagesJPanel

```

All Implemented Interfaces:

java.awt.event.ActionListener, java.awt.event.FocusListener, java.awt.image.ImageObserver,
 java.awt.MenuContainer, java.io.Serializable, java.util.EventListener,
 javax.accessibility.Accessible

```

public class ImagesJPanel extends PluginGUI implements
java.awt.event.ActionListener

```

Images viewer panel. Has a option list buttons and a browser panel with thumbnails.

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Field Detail**filesPanel**

```
protected ThumbnailsBrowser filesPanel
```

Constructor Detail**ImagesJPanel**

```
public ImagesJPanel()
```

Constructs the images viewer panel.

Method Detail

createPanel

```
public void createPanel()
```

Creates the images viewer panel.

Overrides:

[createPanel](#) in class [PluginGUI](#)

focusThumbnail

```
public void focusThumbnail()
```

Requests the focus for the current thumbnail.

actionPerformed

```
public void actionPerformed(java.awt.event.ActionEvent)
```

Invoked when the action button pressed occurs.

Specified by:

[actionPerformed](#) in interface [java.awt.event.ActionListener](#)

Parameters:

e - The action event

focusComponent

```
public void focusComponent()
```

Requests the focus for the initial focused component.

Overrides:

[focusComponent](#) in class [PluginGUI](#)

lhmc.gui.plugingui

Class MusicJPanel

```
java.lang.Object
└ java.awt.Component
    └ java.awt.Container

```

```
public class MusicJPanel extends PluginGUI implements java.awt.event.ActionListener
```

Music player panel. Has a option list buttons and a browser panel with thumbnails.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Field Detail

filesPanel

```
protected ThumbnailsBrowser filesPanel
```

Constructor Detail

MusicJPanel

```
public MusicJPanel()
```

Constructs the music listener panel

Method Detail

createPanel

```
public void createPanel()
```

Creates the Music Panel

Overrides:

[createPanel](#) in class [PluginGUI](#)

createComponents

```
public javax.swing.JPanel createComponents()
```

Creates all the components of the music panel. Is composed by a buttons list and an thumbnail browser.

Returns:

The music panel.

createOptionsPanel

```
public javax.swing.JPanel createOptionsPanel()
```

Creates all the option buttons.

Returns:

The buttons panel.

actionPerformed

```
public void actionPerformed(java.awt.event.ActionEvent)
```

Invoked when the action button pressed occurs.

Specified by:

actionPerformed in interface java.awt.event.ActionListener

Parameters:

e - The action event

focusComponent

```
public void focusComponent()
```

Requests the focus for the initial focused component.

Overrides:

focusComponent in class PluginGUI

lhmc.gui.plugingui**Class MoviesJPanel**

```
java.lang.Object
└ java.awt.Component
    └ java.awt.Container
        └ javax.swing.JComponent

Constructs the movie player panel

Method Detail

createPanel

```
public void createPanel()
```

Creates the movies panel.

Overrides:

[createPanel](#) in class [PluginGUI](#)

createComponents

```
public javax.swing.JPanel createComponents()
```

Creates all the components of the music panel. Is composed by a buttons list and an thumbnail browser.

Returns:

The music panel.

createOptionsPanel

```
public javax.swing.JPanel createOptionsPanel()
```

Creates all the option buttons.

Returns:

The buttons panel.

actionPerformed

```
public void actionPerformed(java.awt.event.ActionEvent)
```

Invoked when the action button pressed occurs.

Specified by:

actionPerformed in interface `java.awt.event.ActionListener`

Parameters:

`e` - The action event

focusComponent

```
public void focusComponent()
```

Requests the focus for the initial focused component.

Overrides:

[focusComponent](#) in class [PluginGUI](#)

lhmc.gui.plugingui**Class DVDCDJPanel**

```

java.lang.Object
└ java.awt.Component

Field Detail**filesPanel**

```
protected ThumbnailsBrowser filesPanel
```

Constructor Detail**RemovableDevJPanel**

```
public RemovableDevJPanel()
```

Constructs the removable devices panel

Method Detail

createPanel

```
public void createPanel()
```

Creates the movies panel.

Overrides:

[createPanel](#) in class [PluginGUI](#)

createComponents

```
public javax.swing.JPanel createComponents()
```

Creates all the components of the removable devices panel. Is composed by a buttons list and an thumbnail browser.

Returns:

The removibles panel.

createOptionsPanel

```
public javax.swing.JPanel createOptionsPanel()
```

Creates all the option buttons.

Returns:

The buttons panel.

actionPerformed

```
public void actionPerformed(java.awt.event.ActionEvent)
```

Invoked when the action button pressed occurs.

Specified by:

actionPerformed in interface java.awt.event.ActionListener

Parameters:

e - The action event

focusComponent

```
public void focusComponent()
```

Requests the focus for the initial focused component.

Overrides:

focusComponent in class PluginGUI

lhmc.gui.plugingui**Class TvJPanel**

```

java.lang.Object
└ java.awt.Component
  └ java.awt.Container
    └ javax.swing.JComponent
      └ javax.swing.JPanel
        └ lhmc.gui.plugingui.PluginGUI
          └ lhmc.gui.plugingui.TvJPanel

```

All Implemented Interfaces:

java.awt.event.ActionListener, java.awt.event.FocusListener, java.awt.image.ImageObserver,
 java.awt.MenuContainer, java.io.Serializable, java.util.EventListener,
 javax.accessibility.Accessible

public class **TvJPanel** extends [PluginGUI](#) implements java.awt.event.ActionListener

Television viewer panel. Has a option list buttons.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Constructor Detail**TvJPanel**

public **TvJPanel()**

Constructs the television viewer panel.

Method Detail

createPanel

```
public void createPanel()
```

Creates the television viewer panel.

Overrides:

[createPanel](#) in class [PluginGUI](#)

createComponents

```
public javax.swing.JPanel createComponents()
```

Creates all the components of the television viewer panel. Is composed by a buttons list.

Returns:

The television viewer panel.

createOptionsPanel

```
public javax.swing.JPanel createOptionsPanel()
```

Creates all the option buttons.

Returns:

The buttons panel.

actionPerformed

```
public void actionPerformed(java.awt.event.ActionEvent)
```

Invoked when the action button pressed occurs.

Specified by:

[actionPerformed](#) in interface [java.awt.event.ActionListener](#)

Parameters:

e - The action event

6. Package lhmc.gui-thumbnailsbrowser

lhmc.gui-thumbnailsbrowser

Class ThumbnailPanel

```
java.lang.Object
└ java.awt.Component
  └ java.awt.Container
    └ javax.swing.JComponent
      └ javax.swing.JPanel
        └ lhmc.gui-thumbnailsbrowser.ThumbnailPanel
```

All Implemented Interfaces:

java.awt.image.ImageObserver, java.awt.MenuContainer, java.io.Serializable,
javax.accessibility.Accessible

```
public class ThumbnailPanel extends javax.swing.JPanel
```

ThumbnailPanel is the external panel that contains the thumbnail and adds a border.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Constructor Detail

ThumbnailPanel

```
public ThumbnailPanel()
```

Constructs the thumbnail panel

Method Detail

setThumbnailPath

```
public void setThumbnailPath(java.net.URLfilePath)
```

Sets the path of the thumbnail.

Parameters:

filePath - The file of the thumbnail.

getThumbnailPath

```
public java.net.URL getThumbnailPath()
```

Gets the path of the thumbnail.

Returns:

The url file of the thumbnail.

lhmc.gui.thumbnailsbrowser

Class ThumbnailFacade

```
java.lang.Object  
└ lhmc.gui-thumbnailsbrowser.ThumbnailFacade
```

```
public class ThumbnailFacade extends java.lang.Object
```

ThumbnailFacade provides a simplified interface to the external classes: ThumbnailsManager, ThumbnailsPanel. Manages the files from a directory and its thumbnails.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

Constructor Detail

ThumbnailFacade

```
public ThumbnailFacade(java.net.URL[]files)
```

Constructs the thumbnail facade.

Parameters:

files - an array of files in a directory.

Method Detail

changeDirectory

```
public void changeDirectory(java.net.URL[]files)
```

Changes the current directory, changin the tree node

Parameters:

files - The new directory files.

getFileNameAt

```
public java.lang.String getFileNameAt(int index)
```

Gets the file name at the certain position.

Parameters:

index - The position of the thumbnail.

Returns:

The file name.

getFileAt

```
public java.net.URL getFileAt(int index)
```

Gets the file at the certain position.

Parameters:

index - The position of the thumbnail file.

Returns:

The url file.

createThumbnail

```
public javax.swing.JPanel createThumbnail(int index)
```

Creates a thumbnail panel for one file at certain position in the tree.

Parameters:

index - The position of the file.

Returns:

The thumbnail panel.

lhmc.gui-thumbnailsbrowser

Class ThumbnailsBrowser

```
java.lang.Object
└ java.awt.Component
    └ java.awt.Container
        └ javax.swing.JComponent
            └ javax.swing.JScrollPane
                └ lhmc.gui-thumbnailsbrowser.ThumbnailsBrowser
```

```
public class ThumbnailsBrowser extends javax.swing.JScrollPane
```

ThumbnailsBrowser its a JScrollPane that contains thumbnails corresponding to the files in a specified directory.

Version:

0.01 20 Jun 2007

Author:

Cristina Roura Claver

focusedThumbnailPanel

protected javax.swing.JPanel focusedThumbnailPanel

Constructor Detail

ThumbnailsBrowser

```
public ThumbnailsBrowser(java.net.URLrootFile,  
                         java.io.FileFilterfileFilter,  
                         PluginFactorypluginFactory,  
                         LHMCGUImainFrame)
```

Constructs the thumbnail browser panel.

Parameters:

rootFile - the current directory to browse.
fileFilter - the file filter to apply if all files are from the same kind.
pluginFactory - the pluginFactory to instance plugins.
mainFrame - the mainFrame of the application.

ThumbnailsBrowser

```
public ThumbnailsBrowser(java.net.URLrootFile,  
                        java.net.URL[]initialRemovableFiles,  
                        java.io.FileFilterfileFilter,  
                        PluginFactorypluginFactory,  
                        LHMCGUImainFrame)
```

Constructs the thumbnalil browser panel for removable devices.

Parameters:

rootFile - the current directory to browse.
initialRemovableFiles - url file array of removable devices.
fileFilter - the file filter to apply if the all files are from the same kind.
pluginFactory - the pluginFactory to instance plugins.
mainFrame - the mainFrame of the application.

Method Detail

getSelectedThumbnail

```
public java.net.URL getSelectedThumbnail()
```

Gets the URL file of the selected thumbnail.

Returns:

The url file correspondig to the thumbnail.

getActualRoot

```
public java.net.URL getActualRoot()
```

Gets current directory.

Returns:

The URL file of the actual root.

setActualRoot

```
public void setActualRoot(java.net.URLroot)
```

Sets current directory.

Parameters:

root - The url file of the actual root.

setInitialRoot

```
public void setInitialRoot(java.net.URLroot)
```

Sets the initial root directory.

Parameters:

root - The url file of the new root directory.

getInitialRoot

```
public java.net.URL getInitialRoot()
```

Gets the initial root directory.

Returns:

The url file of the root directory.

setUsbDevices

```
public void setUsbDevices(java.net.URL[]usbDevices)
```

Sets the removable devices directories.

Parameters:

usbDevices - The url files of the removable devices.

getSelectedThumbnails

```
public java.util.Vector<java.net.URL> getSelectedThumbnails()
```

Gets a vector of URL files from the selected thumbnails.

Returns:

The url files vector correspondig to the selected thumbnails.

getActualFilesystemLocation

```
public int getActualFilesystemLocation()
```

Gets the actual filesystem location

Returns:

The actual filesystem location.

createFilesPanel

```
public void createFilesPanel(java.net.URLrootFile,  
                           inturlType)
```

Creates a panel of thumbnails. Each thumbnail corresponds to a directory, a file or a back image.

Parameters:

rootFile - The current directory.
urlType - the type of url.

getFocusedThumbnailPanel

```
public javax.swing.JPanel getFocusedThumbnailPanel()
```

Returns the current focused Thumbnail.

Returns:

The focused thumbnail panel.

7. Package lhmc.gui.util

lhmc.gui.util

Class NoticeDialog

```
java.lang.Object
└ java.awt.Component
  └ java.awt.Container
    └ java.awt.Window
      └ java.awt.Dialog
        └ javax.swing.JDialog
          └ lhmc.gui.util.NoticeDialog
```

All Implemented Interfaces:

```
java.awt.event.FocusListener, java.awt.image.ImageObserver, java.awt.MenuContainer,
java.io.Serializable, java.util.EventListener, javax.accessibility.Accessible,
javax.swing.RootPaneContainer, javax.swing.WindowConstants
```

```
public class NoticeDialog extends javax.swing.JDialog implements
java.awt.event.FocusListener
```

Custom Dialog.

Version:

0.01 20 Jun 2007

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Constructor Detail

NoticeDialog

```
public NoticeDialog(javax.swing.JFrameframe,  
                     java.lang.Stringmessage)
```

Constructs the custom dialog.

Parameters:

frame - the fame on the dialog will be displayed.
message - the message to display by the dialog.

Method Detail

focusGained

```
public void focusGained(java.awt.event.FocusEvente)
```

Specified by:

focusGained in interface `java.awt.event.FocusListener`

focusLost

```
public void focusLost(java.awt.event.FocusEvente)
```

Specified by:

focusLost in interface `java.awt.event.FocusListener`

lhmc.gui.util**Class SharedFileSystemsDialog**

```

java.lang.Object
└ java.awt.Component
  └ java.awt.Container
    └ java.awt.Window
      └ java.awt.Dialog
        └ javax.swing.JDialog
          └ lhmc.gui.util.SharedFileSystemsDialog

```

All Implemented Interfaces:

java.awt.event.ActionListener, java.awt.event.FocusListener, java.awt.image.ImageObserver,
 java.awt.MenuContainer, java.io.Serializable, java.util.EventListener,
 javax.accessibility.Accessible, javax.swing.RootPaneContainer, javax.swing.WindowConstants

```

public class SharedFileSystemsDialog extends javax.swing.JDialog implements
java.awt.event.FocusListener, java.awt.event.ActionListener

```

Shared filesystems and removable devices choose dialog.

Version:

0.01 20 Jun 2007

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Constructor Detail**SharedFileSystemsDialog**

```
public SharedFileSystemsDialog(javax.swing.JFrame frame)
```

Constructs the chooser dialog.

Method Detail

createHostsDialog

```
public void createHostsDialog(java.lang.String filesystemLocation)
```

Creates the panel of the chooser dialog.

Parameters:

filesystemLocation - the current location

createToSaveDialog

```
public void createToSaveDialog(java.lang.String filesystemLocation)
```

Creates the panel of the chooser dialog to save a file.

Parameters:

filesystemLocation - the current location

getRemovableDevices

```
public java.net.URL[] getRemovableDevices()
```

Gets an array of removable devices location

Returns:

an array of removable devices location.

getHostsNames

```
public java.util.Vector<java.lang.String> getHostsNames()
```

Gets the remote available hostnames.

Returns:

a vector of hostnames.

getRemoteHost

```
public java.lang.String getRemoteHost()
```

Gets the choosed option.

Returns:

the name of the choosed option.

getHostType

```
public java.lang.String getHostType()
```

Gets the choosed option type.

Returns:

the name of the choosed option type.

actionPerformed

```
public void actionPerformed(java.awt.event.ActionEvent)
```

Invoked when the action button pressed occurs.

Specified by:

actionPerformed in interface `java.awt.event.ActionListener`

Parameters:

`e` - The action event

focusGained

```
public void focusGained(java.awt.event.FocusEvent)
```

Specified by:

focusGained in interface `java.awt.event.FocusListener`

focusLost

```
public void focusLost(java.awt.event.FocusEvent)
```

Specified by:

focusLost in interface `java.awt.event.FocusListener`

lhmc.gui.util

Class Keyboard

```
java.lang.Object
└ java.awt.Component
  └ java.awt.Container
    └ java.awt.Window
      └ java.awt.Dialog
        └ javax.swing.JDialog
          └ lhmc.gui.util.Keyboard
```

All Implemented Interfaces:

java.awt.event.ActionListener, java.awt.event.FocusListener, java.awt.image.ImageObserver,
 java.awt.MenuContainer, java.io.Serializable, java.util.EventListener,
 javax.accessibility.Accessible, javax.swing.RootPaneContainer, javax.swing.WindowConstants

```
public class Keyboard extends javax.swing.JDialog implements
java.awt.event.FocusListener, java.awt.event.ActionListener
```

Keyboard. Dialog with keyload letters and an input label to write a name.

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Field Detail

keys

```
public static final java.lang.String[] keys
```

Constructor Detail

Keyboard

```
public Keyboard(javax.swing.JFrame frame)
```

Constructs the Keyboard dialog.

Method Detail

getNewDirectory

```
public java.lang.String getNewDirectory()
```

Gets the name wrote.

Returns:

the wrote name.

actionPerformed

```
public void actionPerformed(java.awt.event.ActionEvent)
```

Invoked when the action button pressed occurs.

Specified by:

actionPerformed in interface `java.awt.event.ActionListener`

Parameters:

`e` - The action event

focusGained

```
public void focusGained(java.awt.event.FocusEvent)
```

Specified by:

focusGained in interface `java.awt.event.FocusListener`

focusLost

```
public void focusLost(java.awt.event.FocusEvent)
```

Specified by:

focusLost in interface `java.awt.event.FocusListener`

lhmc.gui.util

Class ImageJComponent

```
java.lang.Object
└ java.awt.Component
    └ java.awt.Container
        └ javax.swing.JComponent
            └ lhmc.gui.util.ImageJComponent
```

All Implemented Interfaces:

java.awt.image.ImageObserver, java.awt.MenuContainer, java.io.Serializable

```
public class ImageJComponent extends javax.swing.JComponent
```

Loads an Image from an external file and converts it a JComponent

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Constructor Detail

ImageJComponent

```
public ImageJComponent()
```

Constructs a null image JComponent.

ImageJComponent

```
public ImageJComponent(java.io.Filefile)
```

Constructs an image JComponent from a File

Parameters:

`file` - The image file.

ImageJComponent

```
public ImageJComponent(java.lang.Stringstr)
```

Constructs an image JComponent from a String path.

Parameters:

`str` - The path where the image located.

Method Detail

setImage

```
public void setImage(java.lang.Stringstr)
```

Sets an image JComponent from a String path.

Parameters:

`str` - The path where the image located.

getPreferredSize

```
public java.awt.Dimension getPreferredSize()
```

Gets the preferred Size of the image.

Overrides:

`getPreferredSize` in class `javax.swing.JComponent`

Returns:

The size of the image.

paintComponent

protected void paintComponent(java.awt.Graphicsg)

Reimplementation of paintComponent to paint the img.

Overrides:

paintComponent in class javax.swing.JComponent

Parameters:

g - the Graphics context.

lhmc.gui.util

Class CustomButton

```
java.lang.Object
└ java.awt.Component
    └ java.awt.Container
        └ javax.swing.JComponent
            └ javax.swing.AbstractButton
                └ javax.swing.JButton
                    └ lhmc.gui.util.CustomButton
```

All Implemented Interfaces:

java.awt.image.ImageObserver, java.awt.ItemSelectable, java.awt.MenuContainer,
java.io.Serializable, javax.accessibility.Accessible, javax.swing.SwingConstants

```
public class CustomButton extends javax.swing.JButton
```

Custom button with concrete characteristics.

Version:

0.01 Jun 2007

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Constructor Detail

CustomButton

```
public CustomButton()
```

Constructs the custom button.

CustomButton

```
public CustomButton(java.lang.Stringname)
```

Constructs the custom button.

Parameters:

`name` - The text of the button.

Method Detail

getImageURL

```
public java.lang.String getImageURL()
```

Gets the location of the image related to the button.

Returns:

the image path.

setImageURL

```
public void setImageURL(java.lang.StringimgUrl)
```

Sets the location of the image related to the button.

Parameters:

`imgUrl` - the image path.

8. Package lhmc.gui

lhmc.gui

Class LHMCUI

```
java.lang.Object
└ java.awt.Component
  └ java.awt.Container
    └ java.awt.Window
      └ java.awt.Frame
        └ javax.swing.JFrame
          └ lhmc.gui.LHMCUI
```

All Implemented Interfaces:

java.awt.image.ImageObserver, java.awt.MenuContainer, java.io.Serializable,
javax.accessibility.Accessible, javax.swing.RootPaneContainer, javax.swing.WindowConstants

```
public class LHMCUI extends javax.swing.JFrame
```

Main user interface. It contains: At top: A header, with the application name and date information. At center: A center panel with a title and a main panel.

Version:

0.01 Jan 2007

Author:

Cristina Roura Claver

See Also:

[Serialized Form](#)

Constructor Detail

LHMCUI

```
public LHMCUI()
```

Constructs LHMC GUI

Method Detail

changeTitlePanel

```
public void changeTitlePanel(java.lang.String title)
```

Changes the panel title.

Parameters:

`title` - the name of the main panel.

addToMainScreenCardLayout

```
public void addToMainScreenCardLayout(javax.swing.JPanel newMainScreenPanel,  
                                     java.lang.String name)
```

Adds a new panel to the main screen panel card layout.

Parameters:

`newMainScreenPanel` - the panel to add in the card layout.
`name` - the name that identifies the new panel.

restoreMainScreen

```
public void restoreMainScreen(javax.swing.JPanel screenPanel)
```

Restores the initial main screen, removing the previous screen panel.

Parameters:

`screenPanel` - the panel to remove from the card layout.

setMainScreenPanel

```
public void setMainScreenPanel(java.lang.Stringname)
```

Set the correspondig panel to the main panel and shows it. It also changes the title name.

Parameters:

name - the name of the panel to show.

backToMainScreen

```
public void backToMainScreen()
```

Set the main panel to menu panel and shows it.

getIsRecordingDvbt

```
public boolean getIsRecordingDvbt()
```

Returns if the application es recording the DVB-T

Returns:

true if it is recording.

setIsRecordingDvbt

```
public void setIsRecordingDvbt(booleanisRecording,  
                                ExternalPluginep)
```

Sets isRecording attribute and the plugin that is running to record

Parameters:

isRecording - describes if the application is recording or not.
ep - the ExternalPlugin used to record.

getRecordingThread

```
public ExternalPlugin getRecordingThread()
```

Returns if the ExternalPlugin that is used to record DVB-T

Returns:

the ExternalPlugin.

addToCardLayout

```
public void addToCardLayout(javax.swing.JPanel newMainPanel,  
                           java.lang.String name)
```

Adds a new panel to the main panel card layout.

Parameters:

newMainPanel - the panel to add in the card layout.
name - the name that identifies the new panel.

setMainPanel

```
public void setMainPanel(java.lang.String name)
```

Set the correspondig panel to the main panel and shows it. It also changes the title name.

Parameters:

name - the name of the panel to show.

backToMenu

```
public void backToMenu()
```

Set the main panel to menu panel and shows it.

lhmc.gui

Class MainMenu

```
java.lang.Object
└ java.awt.Component
    └ java.awt.Container
        └ javax.swing.JComponent
            └ javax.swing.JPanel
                └ lhmc.gui.MainMenu
```

```
public class MainMenu extends javax.swing.JPanel implements
java.awt.event.FocusListener, java.awt.event.ActionListener
```

Menu panel. It contains a button panel, each for each plugin available and a image panel, that shows an image representig the plugin.

Version:

0.01 Jan 2007

Author:

Cristina Roura Claver

```

Constructor Detail

MainMenu

```
public MainMenu(LHMCGUImainFrame)
```

Constructs the menu.

Parameters:

mainFrame - LHMC object

Method Detail

actionPerformed

```
public void actionPerformed(java.awt.event.ActionEvent)
```

Invoked when the action button pressed occurs.

Specified by:

actionPerformed in interface `java.awt.event.ActionListener`

Parameters:

e - The action event

focusGained

```
public void focusGained(java.awt.event.FocusEvent)
```

Invoked when a button gains focus.

Specified by:

focusGained in interface `java.awt.event.FocusListener`

Parameters:

e - The focus event

focusLost

```
public void focusLost(java.awt.event.FocusEvent e)
```

Invoked when a button loses focus.

Specified by:

focusLost in interface `java.awt.event.FocusListener`

Parameters:

e - The focus event

9. Package lhmc

lhmc

Class LHMC
