In figure 1, the grey vertical bars on the figure indicating the windows of opportunity are blocking the underlying curves. The corrected figure and caption are below.
Figure 1. Environmental characteristics and organic matter availability in the Mediterranean, Pampean and Andean streams. Values of water temperature (°C), light (µmol photons m⁻² s⁻¹) and discharge (l s⁻¹) during enrichment experiments are represented. Windows of ecological opportunity (marked in gray, right plot) were determined after considering favorable conditions for primary producers, microbial heterotrophs and consumer development.
